ADHD Home Routine & Executive Scaffolding Sheet

Framework: Barkley's Externalized Executive Functioning Model (Point-of-Performance Scaffolding)

www.rabbiapsychologist.com

Clinical Parent Resource

Child's Name:

Age / Grade:

Week Of:

Primary Focus:

PART 1: Morning Launchpad (Low Working-Memory Sequence) Target Departure Time: []

Done	Routine Step	Parent Scaffolding Cue (Visual / Environmental)	Target Time
☐	1. Gentle Sensory Awakening	Open curtains for natural light; play quiet rhythmic music (avoid sudden shouting).	7:00 AM

Done	Routine Step	Parent Scaffolding Cue (Visual / Environmental)	Target Time
☐	2. Pre-Set Clothing	Clothes laid out in order the night before on a dedicated chair (eliminates decision fatigue).	7:15 AM
☐	3. High-Protein Breakfast	Provide protein-rich food (eggs, peanut butter, yogurt) to support neurotransmitter function.	7:30 AM
☐	4. Bathroom & Grooming	Visual 3-step mirror card: Teeth (2 min timer) → Face wash → Hair.	7:45 AM
☐	5. Launchpad Bag & Shoes	Backpack, water bottle, and shoes kept in entry launchpad box. Zero search time.	7:55 AM

PART 2: Evening Wind-Down & Dopamine Transition Target Lights-Out: []

Done	Routine Step	Parent Scaffolding Cue (Visual / Environmental)	Target Time
☐	1. Screen Sunset (-60 Min)	All screens powered down and docked in living room charging station (blue light cutoff).	8:00 PM
☐	2. Tomorrow's Launchpad	Pack school bag, verify homework in folder, choose tomorrow's clothes together.	8:15 PM
☐	3. Warm Bath or Heavy Work	Warm water or deep proprioceptive pressure (weighted blanket / big bear hug) to stimulate melatonin.	8:30 PM
☐	4. Co-Regulation Reading	Read aloud together or listen to an audiobook under dim, warm lamp lighting.	8:45 PM

Psychologist's Implementation Rules:

- **Externalize Time:** Children with ADHD suffer from "time blindness". Use an analog clock or visual countdown timer (Time Timer) rather than digital clocks.
- **The Dopamine Bridge:** Transitions from high stimulation (video games/tablets) to low stimulation (homework/sleep) cause distress. Always build a 5-minute sensory bridge (e.g. snack, jumping on trampoline, listening to 1 favorite song).
- **Consistency Over Perfection:** Follow the sequence rather than rigid minutes. The order of activities forms the neurological muscle memory.

Clinical Notice: This worksheet is for educational parent guidance. It does not substitute for an individual medical, neuropsychological, or psychological assessment.
