CHILD'S NAME	AGE / GRADE	DATE	COMPLETED BY

Rate Each Skill: 1 (Rarely) to 5 (Consistently Strong)		
EXECUTIVE SKILL	BEHAVIORAL INDICATOR IN DAILY LIVING	RATING (1-5)
Task Initiation	Can begin homework, chores, or grooming independently without procrastinating or needing 5 verbal prompts.	[]
Working Memory	Can hold a 3-step instruction in mind ("Get shoes, pack water bottle, grab coat") without forgetting the middle step.	[]
Emotional Control	Recovers quickly when losing a game or hearing "no" without having a 30-minute emotional spiral or aggressive reaction.	[]
Sustained Attention	Can maintain focus on non-preferred tasks (e.g. maths, cleaning) for at least 15-20 minutes without wanderlust.	[]
Organization	Can locate school supplies, forms, and books in backpack or desk within 30 seconds without chaotic searching.	[]
Time Management	Has realistic sense of how long a 10-question worksheet takes; leaves on time for school without panicking.	[]

Intervention Strategy: Identify the 2 lowest-rated skills. Do not attempt to fix all at once. Build environmental scaffolds (visual checklists for Working Memory; body-doubling for Task Initiation).
