Rabbia Psychologist Child Development Services

Sensory Profile Audit & Co-Regulation Matrix

Framework: Ayres Sensory Integration (ASI) Principles & Polyvagal Co-Regulation Science

www.rabbiapsychologist.com

Clinical Parent Resource

Child's Name:

Age:

Evaluation Date:

Arousal State at Peak:

Sensory System	Over-Responsive (Avoidant Signs)	Under-Responsive (Seeking Signs)	Calming / Regulatory Intervention
Proprioceptive (Body Position & Muscle)	Avoids physical contact, dislikes wearing clothes with tags or seams.	Crashes into furniture, stomps feet, hugs too tightly, constantly jumps.	Heavy Work: Carrying weighted laundry basket, wall push-ups,

Sensory System	Over-Responsive (Avoidant Signs)	Under-Responsive (Seeking Signs)	Calming / Regulatory Intervention
Vestibular (Balance & Movement)	Fearful of feet leaving ground, swings, elevators, or tipping head back.	Constantly spins, rocks in chair, hangs upside down without dizziness.	bear hugs, crawling through obstacle courses. Linear Rhythmic Motion: Gentle back-and-forth hammock or rocking chair (avoid erratic spinning).
Auditory (Hearing & Volume)	Covers ears with hand dryers, vacuum cleaners, crowds, or echoey halls.	Makes repetitive loud vocal noises, turns TV volume to maximum.	Sound Dampening: Over-ear headphones; calming brown-noise audio tracks; quiet acoustic corners.
Tactile (Touch & Texture)	Distressed by messy play (slime, glue), hair washing, nail trimming, wet socks.	Touches every surface and person; rubs face on specific blankets or fabrics.	Deep Touch Pressure: Firm massage, seamless sensory socks, compression vests, predictable dry textures.
Visual (Light & Patterns)	Squints in sunlight; gets agitated under flickering fluorescent classroom tubes.	Stares intently at spinning wheels, bright screen lights, or optical patterns.	Visual Resting: Warm dim lamplight; sunglasses outdoors; reducing visual clutter in study spaces.

Psychologist's Meltdown De-escalation Protocol:

Step 1: Low Arousal Presence

Lower your vocal volume and pitch. Sit below their eye level. Silence talking; the auditory center is overloaded.

Step 2: Remove Demands

Suspend homework, shoes, or lectures immediately. The only goal is restoring nervous system equilibrium.

Step 3: Proprioceptive Anchor

Offer a firm blanket wrap or cold drink of water with a straw (sucking provides instant oral motor calming).

Clinical Notice: Sensory diet strategies are supportive developmental aids. If your child exhibits severe sensory defensiveness impacting nutrition or mobility, consult an Occupational Therapist specializing in sensory integration.
