

Simons Sensory-Sleep Biometric Profile: Parent Audit Sheet

Circadian Actigraphy & Sensory Overload Sleep Disruption Protocol

Evidence-Based Resource

Clinical Model: Simons Foundation Pediatric Sleep Research

SENSORY-CIRCADIAN INTERACTION CHECKLIST

Neurodivergent children process daytime sensory information differently, directly delaying the release of endogenous melatonin and inhibiting evening parasympathetic tone.

Sensory Domain	Sleep Inhibiting Triggers	Clinical Intervention Protocol
Visual System	Screen blue light (blocks melatonin), fluorescent overhead lighting after 7 PM.	Amber / red 2700K lighting, complete blue-light cutoff 90 min before sleep.
Auditory System	Hyper-acusis to household humming, plumbing, outside traffic.	Continuous pink/brown noise machine at 55dB; double curtains.
Proprioceptive	Motor restlessness, restless legs, inability to settle nervous system.	Weighted blanket (10% body weight + 1 lb), firm compression hugging, warm bath.

WEEKLY SLEEP PRESSURE & SETTLING LOG

Night	Wind-Down Start	Bedtime In	Approx Sleep Latency	Night Wakings	Next Day Arousal
Monday					Low / Mod / High
Tuesday					Low / Mod / High
Wednesday					Low / Mod / High
Thursday					Low / Mod / High
Friday					Low / Mod / High
